

## 1) Creating First Database

//below is the syntax for creating database. Here database name is **myblogs**

**use myblogs;**

// creating first document in database **myblogs**. Here, document name is **"articles"**

**db.articles.insert({name : "mongoDB intro", category :  
"database", tags : ["nosql","db","bigdata"]}));**

// querying a document

**db.articles.find().pretty();**

// creating a **document** and saving to collection

**var articleInfo ={};**

**articleInfo.articleName= "MongoDB Introduction";**

**articleInfo.authorName ="Sunil G";**

**articleInfo.tags = ["database", "NoSQL","DBA", "DEV"];**

// saving a document to collection

**db.articles.save(articleInfo);**
